

MSA Latchways WinGrip® System Takes Fall Protection to New Heights

MSA's engineers developed the easy-to-use, quick-to-install WinGrip system to keep aerospace employees protected when working at height. WinGrip's vacuum anchor fall protection pads are versatile enough to accommodate single and multiple users, and durable enough for work inside the hangar or outside on the apron.

- Lightweight and portable anchors weigh less than 13 lbs.
- Intrinsically safe, even with fuel tanks open—runs on compressed air or nitrogen, so there are no electrical requirements.
- Spans the length of any aircraft wing, allowing up to four workers access to all areas without ever disconnecting.
- The WinGrip All-In-One (AIO) provides a single anchor point and is well suited to line maintenance and other temporary work.

*Suitable for use
on all aircraft*
